- 6. A spur track was under construction. Cement which arrived on this spur track was hauled directly to the concrete mixers below the rail-road embandment. Other construction material which was unloaded from railroad cars on the spur track was hauled on narrow-gauge field railway tracks to the individual construction sites.
- 7. The above-ground construction section was responsible for the construction of quartering facilities. The foundations for barracks buildings were completed. \*

Comment. It appears that the difficulties at the construction	25X1
site of Drewitz airfield were overcome;	25X1
trains with construction material arrived at the field,	
This material has been used at the field. Concreting started on the	x).
runway. The spur track to the field branches off from the Cottbus-Guber	1
railfied line at a point located 220 meters northeast of the couthraster	771
The definite course of the spur track cannot be deformined from the rough	יוֹין
sketch which was forwarded previously.	
Judging by information that the construction site is located north and	
south of the Cottbus-Guben railroad-line, it is inferred that the railre	ad
lime will have to be rerouted later.
